Researcher's Statement
You are being asked to take part in a research study. The information in this form will help you decide if you want to be in the study. Please ask the researcher(s) below if there is anything unclear or if you need more information.

Principal Investigator: Xiaoming Zhai
Science Education & Institute for Artificial Intelligence
Xiaoming.Zhai@uga.edu

Participation Information:

- This study is evaluating if the design of study tools like Quizlet can be improved with GenAI and gamification to further enhance computer science students' retention of reviewed course material.
- Your involvement in the study is voluntary, and you may choose not to participate or to stop at any time without penalty or loss of benefits to which you are otherwise entitled.
- Participation will come in two phases: an initial 60-minute session and a brief 15-minute follow-up session.
- Step-by-step guide for participation:
    - 1st Session:
        - Complete a short quiz on course material
        - Study using the given study tool for your section
        - Complete a short quiz on course material
    - 2nd Session:
        - Complete a follow-up quiz on course material
- There are no expected risks for participation.
- Participants may benefit from reviewing course material; however, they will not receive any financial incentives or extra credit.

We, the researchers, are asking you to participate in this study if you are an undergraduate student enrolled in a computer science course as we would like to study how traditional study tools could be improved to better aid students studying computer science.

If you are interested in participating in the study, please read the additional information on the following pages, and feel free to ask questions at any point.

Study Procedures and Time Commitment
Participants will be asked to commit to two sessions: one 60-minute session and another 15-minute session. In the first 60-minute session, participants will take a short quiz on their course material, then study that material using the provided study tool, and finally take an immediate post-assessment. In the follow-up session approximately a week after the first session, students will take a long-term post-assessment of the previously reviewed course material.

Risks and discomforts
There are no expected risks for participants in this research.

Benefits
Participants may benefit from this research as they will be reviewing course material.
We expect that this study will contribute to scientific knowledge of how the use of GenAI and gamification may be incorporated into studying platforms to assist learners in more effective retention.

Confidentiality of records
We will only keep information that could identify you long enough to match your responses in the pre-assessment with the information collected while using the study tool provided in the first session and with the post-assessments. We do not plan to share this information with anyone who is not connected to this research study.

The information collected during this research study will not be used or distributed for future research.

Internet Data Collection
This research involves the transmission of data over the Internet. Every reasonable effort has been taken to ensure the effective use of available technology; however, confidentiality during online communication cannot be guaranteed.

Participant rights
If you have any questions or concerns regarding your rights as a research participant in this study, you may contact the Institutional Review Board (IRB) Chairperson at 706.542.3199 or irb@uga.edu.

If you agree to participate in this research study, please sign below:
